Venetian blinds model Ultimate Mega View

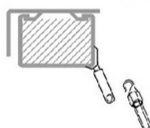

Place the plate in such a way that it does not interfere with the mechanisms inside the profile of the blinds. Attach the plate with screws in one of the two illustrated ways.

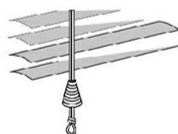

Afterwards place the upper profile of the blinds as illustrated on the scheme.

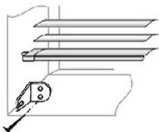

Then rotate the locking taper.

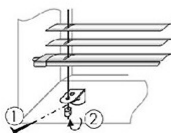

Attach the hook to the ear of the worm gear of the stick.

Pass the cord through the bell and in the bottom end make a big enough stator node. Drop the bell on the node.

Fixators of the blinds: They should be installed in the bottom part of the joinery. Their position is in line with the width and height of the bottom profile of the blinds.

Side guiding of the blinds: Plates should be installed in a way that allows the cord to hang vertically. The cord should be taken through the keg, it should be stretched and locked up with a screw.
